

PNM Residential Level 2 Charger Rebate – Tesla Wall Connector Waitlist Acknowledgement

I, _____, am aware that Public Service Company of New Mexico (PNM) currently offers a Residential Level 2 Charger Rebate for residential customers who have purchased and installed at their PNM residential service address a qualifying residential Level 2 EV charger on or after December 15, 2022 (the effective implementation date for PNM’s 2022-2023 Transportation Electrification Program).

I understand that PNM requires customers who receive a Residential Level 2 Charger Rebate to enroll in the Whole-Home EV Charging Pilot Rate and to share EV charging data with PNM, and the charger manufacturer and/or network provider for my EV charger will share EV charging data collected by my EV charger with PNM as a condition of my receipt of a Residential Level 2 Charger Rebate.

I understand that the receipt of any rebate monies for participating in PNM’s Residential Level 2 Charger Rebate program is contingent upon Tesla’s ability to develop a data sharing solution and to effectively deliver charging data to PNM in addition to continuing to meet technical charger specifications as approved by the New Mexico Public Regulation Commission.

I understand that PNM and Tesla are working to facilitate an effective data sharing solution, but a solution may not be delivered for many months or not at all. Furthermore, I understand that PNM has developed a waitlist to receive information from potentially qualifying and interested residential customers, and I am enrolling in the Residential Level 2 Charger Rebate waitlist as a result.

I understand that PNM is under no obligation to deliver a Residential Level 2 Charger Rebate to me unless and until Tesla has effectively developed a data sharing solution and begun to deliver EV charging data. I understand that, if Tesla is able to effectively develop a data sharing solution, I will receive my Residential Level 2 Charger Rebate after PNM has reviewed my application for eligibility and has begun to receive charging data from my EV charger via Tesla.

I agree to hold PNM and its administrative contractor, DNV Energy Services USA Inc., harmless in the case that Tesla never develops a data sharing solution in order to share EV charging data with PNM or does not develop such a data sharing solution in the timeframe where I would be eligible to receive a Residential Level 2 Charger Rebate.

I understand that Tesla may not be able to effectively deliver charging data to PNM, and, if so, my rebate application will be cancelled, and I will not receive a Residential Level 2 Charger Rebate.

Acknowledged this the _____ day of _____, _____.
